

ABSTRACT OF THE DISCLOSURE

A print system includes an input unit for inputting content;
an operation unit for the user to set a print condition and
enter a print execution command; a print unit for printing the
5 input content on a medium based on the setup print condition
when the user enters a print execution command; and a display
unit for displaying content laid out for the page being printed
in the print unit. The user monitors the content laid out for
the page being printed on the display unit.
